

Collector coin

Dedicated to Artificial Intelligence

Obverse/Reverse

This cube-shaped coin symbolises artificial intelligence (AI) as an artificially created system capable of imitating human intellectual and creative activity. The rows of squares represent the infinite processes of AI systems. The relief on the coin, the inscription LIETUVA (Lithuania), the denomination (€20), the year of issue (2024), and the mintmark of the Lithuanian Mint are featured on six different planes, where the expressive and detailed elements of the coin's design have been perfectly formed in glossy and slightly matt surfaces.

Denomination: €20

Composition: silver Ag 925

Weight: 32.80 g

Quality: proof-like

Coin type: collector

Designed by Egidijus Rapolis

Side length of cube: 15.00 mm
